Cell Biology

BiPC / NEET revision notes

Study snapshot

Review cell structures and how each one contributes to the life of a cell.

Key ideas

- The cell membrane regulates movement into and out of the cell.
- Nuclei in eukaryotic cells contain most of the genetic material.
- Mitochondria are a major site of aerobic ATP production.
- Ribosomes assemble proteins from amino acids.
- Mitosis produces two daughter cells with the same chromosome number.

Try the questions on page 2 before checking your work.

Cell Biology

Quick practice

1. Which organelle is the main site of protein assembly?
2. Name the process by which water moves across a selectively permeable membrane.
3. How many daughter cells result from one completed mitotic division?
4. Where is most eukaryotic DNA located?

Answer notes

1) Ribosome
2) Osmosis
3) Two
4) In the nucleus

Review the method, then retry any question you missed.
